BSIT-3A

What did you learn from this activity?

We were tasked to create a website portfolio using HTML, CSS, and JavaScript, and deploy it to GitHub. GitHub is a web-based platform software developers use to store, manage, and collaborate on code projects using a version control system called Git. While accomplishing this activity it made me realize the importance of proper storing and management of my present and previous works. This activity has allowed me to explore the GitHub environment for version control and hosting. Furthermore, this gives me a chance to demonstrate my web development skills.
